Sorry-3 Help installed my computer on my standing desk today, so I've been dealing with the disarray.

I have a call at 2, so how about after that-probably 230?

John - Did you still want to talk about responding to USG's request? I'd like to respond, in some way, this afternoon.

Thanks.

I'd need to search around. It's available for a free download on EPA's website. It's EPA's preferred model for stationary source modeling of criteria pollutants. I used it while I was a consultant. Check this website:

http://www3.epa.gov/scram001/dispersion_prefrec.htm

Ok-can you find something talking about the public nature of the modeling program?

The dispersion model, AERMOD, is a public domain model.

Does it contain information about the program we used to run the data?

The modeling files consist of the model input file, the output file, and the meteorological data file. None contain CBI.

Dan-

What is in the modeling file exactly? Is there confidential information about the model or modeling process?

Just checked with Sarah M. and Sara B. They seem to think it's fine to send our modeling files.

Daniel-

As you know, USG has hired an environmental consultant with air dispersion modeling expertise to help us address the issues raised in the EPA's NOV. We would like to review and develop an understanding of the modeling work that the EPA has done in advance of our February 10th meeting. Will you please provide us with the modeling input and output files, including the input file provided by the MPCA that you referenced, as well as any other modeling data, results, or analysis?

I have copied our attorney Matthew Cohn and EPA attorney John Matson in case it is the EPA's position that there is a legal basis for holding back the modeling data and information requested. You or Mr. Matson may respond to both Mr. Cohn and me on this issue.

Thank you.

Respectfully,

Greg Kinser

Mike,

Your proposed conference date of February 10th works for us. Please provide an arrival/duration time when you have one.

Also, regarding the modeling files, EPA used the input file provided by MPCA with the stack

data provided in your recent response to our information request. The model was run for the 1-hour average as opposed to the old 3-hour, 24-hour, and annual averages.

Thanks.

Dan,

I received the EPA's NOV, EPA-5-15-MN-03 which is requesting a meeting. We will give you a call to coordinate a face to face meeting tomorrow January 20, 2016 at 1:30 P.M. Central Time zone using the following phone number:

312-886-6814

Best Regards,
